# The Smart Contract, Centralized and Decentralized Applications Platform

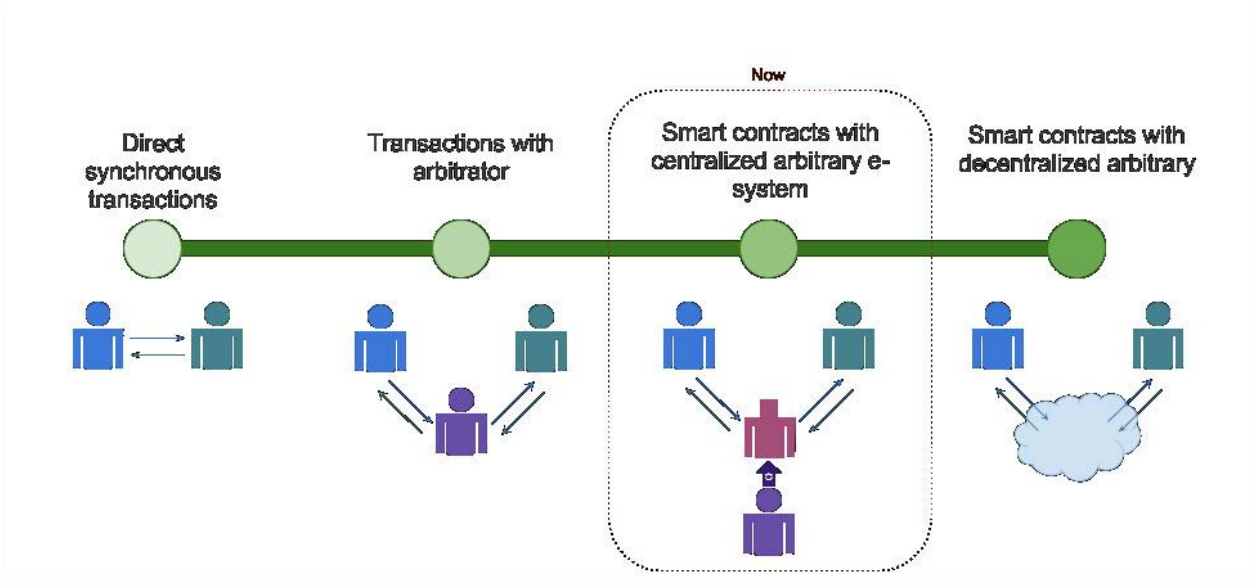

## Smart Contracts Applications?

### Smart Contract Deployment

Smart contract applications include financial purposes such as investing, borrowing, lending and trading. Healthcare, and real estate as well as gaming can be used in this kind of applications; as well as more complex applications involving

like having digital assets being directly controlled by a piece of code implementing arbitrary rules ("smart contracts") or even entire corporate structures can be used to configure even blockchain based centralized (CEX), decentralized (DEX) autonomous organizations (DAOs).

## **Ethereum blockchain**

A Decentralized blockchain platform that a peer-to-peer network establishes that securely executes and verifies application code is called smart contracts. Without a trusted central authority allow participants to transact with each other by the Smart contracts.

## **Binance**

Binance is a cryptocurrency exchange in which is the largest exchange in the world in terms of daily trading volume of cryptocurrencies.

## **BEP20 Smart Contract**

Binance Smart Chain token standard is BEP20. It's quite similar to Ethereum's ERC20 standard; in other word, it expands on it. BEP20 sets rules that should be follow by the all tokens created on Binance Smart Contract (BSC).

Programmable blockchain with support for smart contracts and compatible with EVM, makes it a good piece of codes for building decentralized applications.

# Habitant HBT

Habitant HBT is a decentralized blockchain application that built on BEP20 Smart Contract.

## Vision

Habitant HBT is a member token of the Financial Support Project Module. This module is a member of an enterprise blockchain project " The Project VR ".

Habitant HBT BSC BEP20 Token is a member of crypto currency backup program of financial support module.

Habitant was designed due to the recent needs of P2P transactions solutions.

## **Life time of Habitant HBT Token**

The stability of Habitant HBT bep20 token related to the strategy inspired by the trend of the financial markets. Due to the fake blockchain projects revolving in the market because of the fame of the crypto currencies of the market we decided to launch C-EXINS's own blockchain project to

make investments stable and secure as well as which could be in the interest of the every market investors.

Smart Contract was the fastest way to bring C-EXINS's ideas into the reality. We chose the Binance Smart Contract BEP20, a better solutions for our blockchain tradable crypto currency like bitcoin.

## **Habitant HBT Trade with Pairs BNB/HBT, USDT/HBT**

Created & owned by the C-EXINS Blockchain Department.  
Launched on 15 of May, 2022. Built on Binance Smart Chain Technology.

Successfully launched on swap exchange. Trading pairs are

( BNB/HBT, USDT/HBT ) on [pancake.finance/swap](https://pancake.finance/swap) , Trade on other exchanges would be available in the coming days.

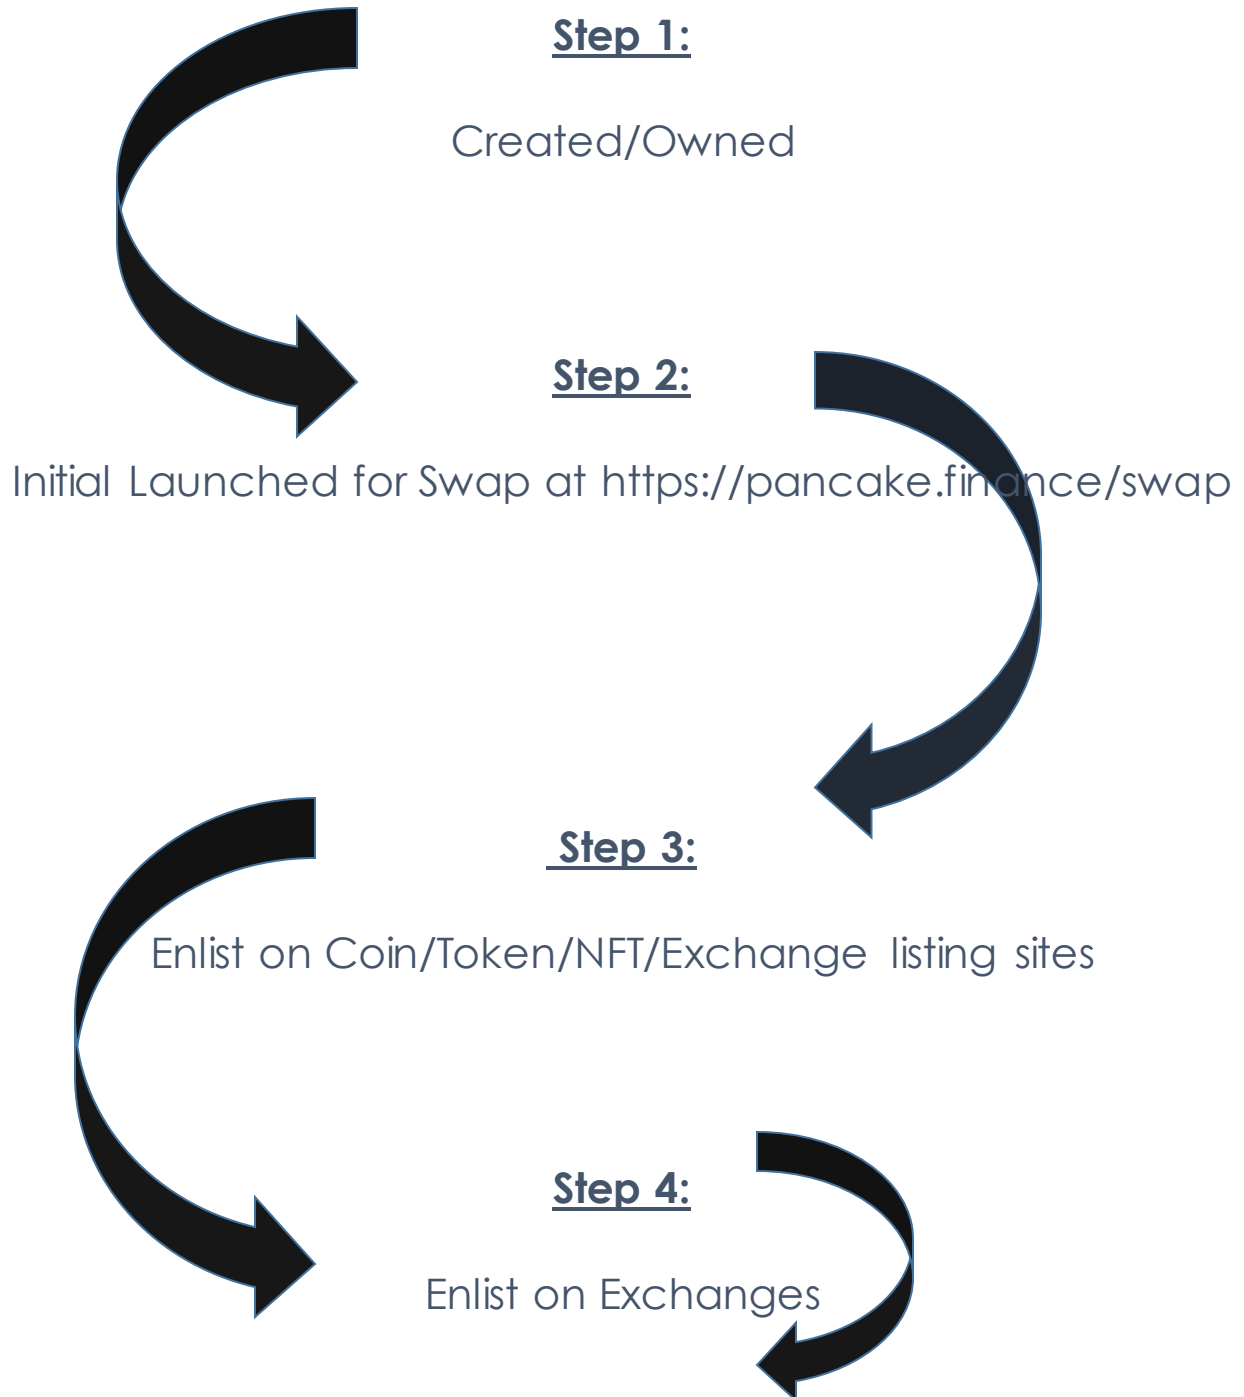

## Habitant HBT listed on Coins listing Markets

Habitant HBT is listed on several crypto currency price updates portals providing the 24/7 market capital ticking facilities.

## Roadmap & Timeline of the Habitant HBT project

**Step 5:**

Open for Trade

**Step 6:**

Get included into StableCoin to Habitant HBT BEP20 Token

**Step 7:**

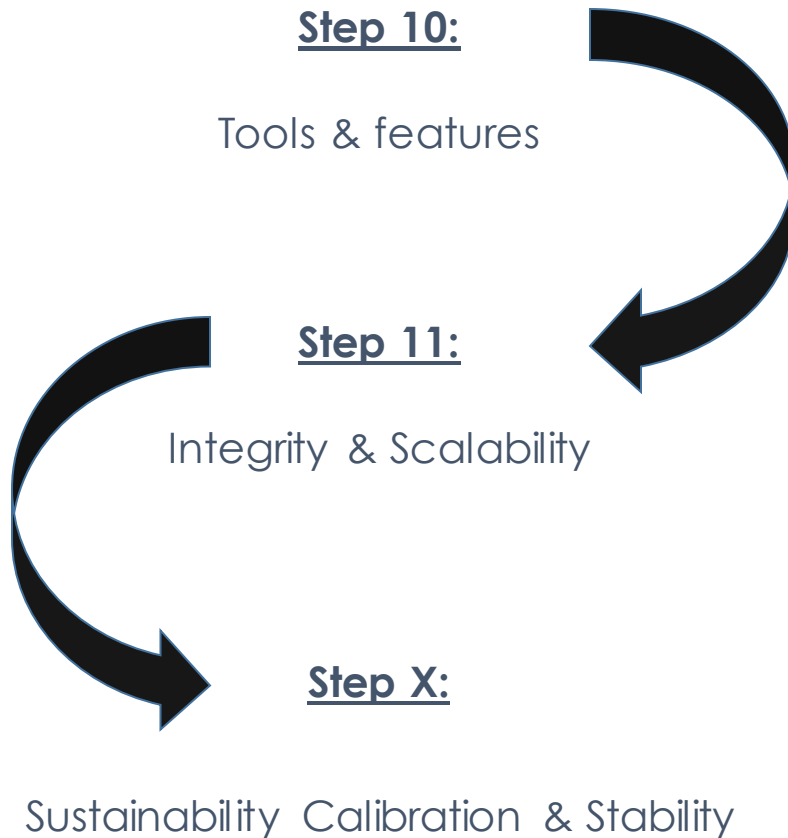

Design & developments for the Habitant HBT ecosystem

**Step 8:**

Create the market place (C-EXINS exchange) for Habitant  
HBT

**Step 9:**

Payment Processor for easy payments

Habitant HBT would be available for trade on exchanges right after the completion of required legal documentation “ Legal opinion letter “, where needed, to increase the trust and reliability of the Habitant HBT BSC BEP20 token. And for the accomplishment of the buy's safety levels as well.
